

What makes a Vornado Air Purifier the obvious choice?

Minimal Maintenance

Equipped with replacement filter light indicators.

Airflow Settings

Multi-speed to assist the purification of air: Low, medium, high and quick clear.

5-Year Warranty

5 year replacement warranty for factory faults and defects.

Whole Room coverage

Whole room purification for spaces up to 30m².

TRUE HEPA Filter

The most effective way to remove allergens and irritants from the air.

Efficient Technology

Automatic dust sensing technology.

Invest in your **health**,
invest in a **Vornado Air Purifier.**

Regular Purifier

Vornado Purifier

Indoor air is up to 5 times more polluted than outdoor air.

As indoor pollution continues to be an environment concern, the air we breathe becomes increasingly more dangerous and hazardous to our health. There is therefore an urgent need to clean the air around us. Vornado's exclusive and powerful vortex circulation provides "whole-room" air filtration, turning your entire room into a clean comfort zone.

Choosing a Vornado Air Purifier is health-smart!

Model AC300

- Whole Room Air Purification: up to 20m²
- 1 Carbon pre-filter Captures Odours
- 1 True HEPA Filter Captures 99.97% of airborne contaminants
- 3 Speed Settings
- Filter Change Indicator
- Electronic Push Button Controls
- Compact Size Fits Easily in Most Spaces
- 5 year limited warranty
- Perfect for small to mid-sized rooms with minimal ventilation.

RRP \$319

Model AC500

- Whole Room Air Purification: up to 30m²
- 2 Carbon pre-filter Captures Odours
- 2 True HEPA Filter Captures 99.97% of airborne contaminants
- 4 Speed Settings
- Filter Change Indicator
- Electronic Push Button Controls
- Automatic Dust Sensing Mode
- Sleep Mode for Quiet Night Time Operation
- 5 year limited warranty
- Suitable for large rooms or entertainment areas where high traffic occurs.

RRP \$489

Carbon and True HEPA filtration

- Carbon filter:** Captures odours. Gas/Chemical particles stick to the carbon filter, therefore being removed from the air.
- True HEPA filter** removes 99.97% of airborne irritants at 0.3 microns or greater in size.
- Together the filters capture pollen, dust, mould spores, pet dander, smoke, odours and more.

Carbon filter RRP \$29.99 HEPA filter RRP \$75.99

You'll breathe easier knowing that the **Vornado Air Purifier True HEPA collection removes 99.97%** of airborne contaminants in your home. True HEPA filtration traps dust, pollen, pet dander, smoke and more while the carbon pre-filter adsorbs odours and captures larger particles like hair.

2 Stage Protection

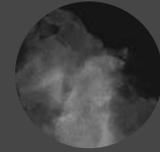

Poor air quality can trigger severe allergy and asthma symptoms. Carbon filtration captures odours while True HEPA filtration captures 99.97% of particles 0.3 microns or larger.

Human Hair
>10 Microns

Pet Dander
1 - 10 Microns

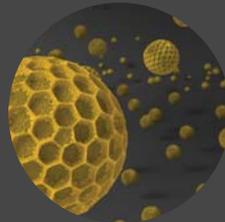

Smoke Particles
0.01 - 1 Micron

Mould Spores
3 - 10 Microns

Odours

Pollen
>10 Microns

Dust Mites & Debris
3 - >10 Microns

Bacteria
0.05 - 10 Microns

Vornado seeks to raise awareness surrounding what impact an Air Purifier can have on health and quality of life for those who suffer with asthma, allergies and other respiratory problems.

Installing a Vornado Air Purifier means consumers are taking the necessary precautions to remove allergens, dust, pollens, odours, chemicals and VOC's (volatile organic compounds).

The effectiveness of both filters is measured by the CADR (clean air delivery rate).

**Vornado ratings are: CADR Ratings: Dust - 152 | Pollen - 170 | Smoke -142 (AC300)
Dust - 218 | Pollen - 245 | Smoke - 205 (AC500)**

THE TRUE HEPA DIFFERENCE

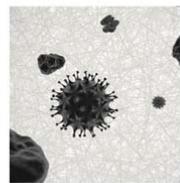

HEPA stands for "High Efficiency Particulate Air".

True HEPA Air Purifiers have been traditionally used in hospital operating and isolation rooms, pharmaceutical and computer chip manufacturing, as well as in other applications requiring "Absolute" Filtration.

The folds and small holes in the True HEPA filter capture particles which are not visible to the naked eye such as bacteria, small smoke particles, dust, pollen and so much more.

WARNING

There are growing deceptive claims of HEPA type. If the filter does not adhere to 99.97% and 0.3 micron guidelines, it is not considered True HEPA and will not remove particles from the air as effectively.

MAGNIFIED HEPA FILTER

MAGNIFIED CARBON FILTER

smoke mould insecticide dust
bacteria human hair spores
pet dander pollen dust
cooking smoke odours
dust mites
